How long have you been in the UK?

A very wide range of times in the UK (years) with mean 6.82, median 4.00.

Possible note for the toolkit: include time units in this question and other 'how long' questions – there were a number of responses without months or years, only a number as the answer, and these have had to be discarded since we can't be sure what the units were.

Which country did you live in before you came to the UK

Additional analysis

Age by gender

The following analysis (independent sample t-test) shows that the women in the sample are, on average, over 7 years older than the males (mean female age 34.9 years, male 27.6).

Problems finding a class – by gender

I have used chi-square to test for gender differences in responses on problems finding and coming to class, and t-tests to do similar for age differences.

None

Men are more likely to report finding no barriers – 58.2% of males state this compared to 43.2% of females.

Problems finding a class – by age

Only *Cost* showed a difference here with those reporting this as a problem a little older (4 years) on average (borderline significant – $p=0.056$).¹

Age	No	128	31.55	10.717	.947
	Yes	31	35.65	10.180	1.828

¹ Note that because we generally have small numbers answering in the affirmative, there isn't a great deal of statistical power to detect any differences.
